rantizi-portfolio.vercel.app | github.com/rantizi

Computer Science student at Universitas Padjadjaran (GPA 3.74) with hands-on experience engineering full-stack web applications, internal dashboards, and data-aware software systems. Proven technical scope across 1 full-stack e-commerce platform, 1 internal operations dashboard, and 50,000+ records utilizing authentication modules, API integrations, and database workflows. Adept at shipping deployed cloud applications with optimized query performance and asynchronous third-party architectures.

EDUCATION

Universitas Padjadjaran | GPA 3.74 / 4.00
Bandung | 2023 – present

SMAN 65

Jakarta | 2020 – 2023

WORK EXPERIENCE

Full Stack Developer Intern — PT Infomedia Nusantara

November 2025 – February 2026

- Engineered 1 centralized internal sales funnel dashboard using Next.js, TypeScript, and React to track and visualize 5 critical pipeline stages (Leads, Prospect, Qualified, Submission, Win), improving internal project tracking efficiency across the Marketing Division.
- Developed core multi-page modules, automated add-data flows, client account profiles, and a secure internal reporting interface backed by Next.js App Router.
- Designed PostgreSQL database models and integrated Supabase Auth to implement role-based secure access control, ensuring cleaner storage and dashboard-ready query performance.
- Automated data ingestion by building a Python/pandas ETL pipeline supporting CSV/Excel uploads, reducing manual spreadsheet handling by 30% across 50,000+ raw master records.

Data Analyst Intern — Project Based Internship at Luar Sekolah

July – September 2025

- Automated data cleaning and transformation workflows on a raw dataset of 30,000+ operational records, reducing data anomalies by 40% to ensure pipeline integrity.
- Executed multivariate analysis and regression testing to isolate critical platform drivers, extracting 3 actionable system performance insights for leadership.
- Built 1 centralized interactive Excel management dashboard utilizing dynamic PivotTables and multi-variable slicers to consolidate previously siloed operational metrics.
- Translated engineering and analytical findings into structured reporting assets, reducing manual data processing overhead by 25% for cross-functional teams.

PROJECTS

Busana Arafah — Full Stack E-Commerce Website

June - July 2026

Full Stack Developer | Tech Stack: Next.js 15, TypeScript, React, Tailwind CSS, Supabase

- Engineered 1 production-ready full-stack e-commerce platform executing 12+ highly-responsive user and admin workflows, utilizing Next.js App Router and Zustand global state management to process seamless catalog filtering, multi-item cart operations, and dynamic checkout funnels.
- Integrated 3 core third-party APIs (Midtrans Snap for secure payments, Biteship for real-time logistics calculation, and Resend for transactional emails) to automate an end-to-end asynchronous checkout pipeline, eliminating manual payment and shipping verification workflows.
- Designed a secure, authenticated administrative control panel for unified product catalog updates and live stock management, reducing operational inventory overhead by 40% through automated data synchronization.

FromFram — Meal-Kit Subscription Web App

March - May 2026

Frontend Developer | Tech Stack: Next.js, TypeScript, React, Prisma, PostgreSQL

- Engineered 8+ dynamic, state-driven user-facing routes using Next.js App Router and TypeScript, constructing interactive layouts for personalized health profiling, multi-criteria subscription matching, and real-time delivery tracking.
- Streamlined a complex, multi-step onboarding and subscription wizard, leveraging React Hooks and persistent client-side state synchronization to enhance form-validation flows and improve user checkout completion rates by 20%.

- Collaborated within an agile team framework to seamlessly align client-side UI components with backend JWT authentication, Prisma ORM database models, and active subscription updates.

LOTR Semantic Web — Knowledge Graph Search Application

April 2026

Full Stack Developer | Tech Stack: Python, Flask, RDF Turtle, OWL/RDFS, SPARQL, Apache Jena Fuseki, Protégé

- Engineered a semantic web search application using Flask and Apache Jena Fuseki to execute optimized SPARQL queries across a knowledge graph of 979 semantic RDF triples, enabling real-time, relationship-driven data retrieval.
- Designed an automated CSV-to-RDF data pipeline using Python and RDFLib to ingest and transform 6 raw datasets, converting unstructured tabular data into a tightly modeled OWL/RDFS graph structure with 87 explicit character relationships.
- Developed interactive web interfaces that dynamically parse and visualize 5 interconnected entity classes (comprising 40 characters, 3 films, 10 locations, 5 objects, and 10 events), permitting seamless graph navigation through the frontend.

Data Warehouse Shopee — E-Commerce Data Warehouse & Dashboard

May 2026

Data Analyst | Tech Stack: Python, pandas, SQLite, SQL, DB Browser, Google Sheets, Looker Studio

- Designed an e-commerce data warehouse utilizing a star-schema model across 6 distinct business entities to systematically ingest a raw Kaggle transactional dataset containing 90,000+ records.
- Architected a Python/pandas ETL pipeline to clean, filter, and curate the 90,000+ raw source rows into 10,000+ highly optimized, analytical-ready records inside a SQLite database.
- Deployed 1 interactive Looker Studio dashboard powered by complex SQL/OLAP queries, accelerating simulated business reporting intervals by 30% across core revenue, net profit, and shipping metrics.

Additional Portfolio: Engineered 5+ other technical projects spanning web, mobile, and dashboard.

LEADERSHIP & ORGANIZATION

Administrative and Secretarial Staff | Himatif FMIPA Unpad

Januari 2024 – Januari 2025

- Managed a central membership database containing 500+ student and alumni records, maintaining database structural integrity and records verification for institutional tracking.
- Streamlined digital archiving workflows, accelerating document retrieval speeds by 30% while managing a baseline of 5+ official documents weekly.

Informatics Events & Committees | Central Coordinator / Secretary

2023 – 2024

- Coordinated data synchronization and documentation workflows for multi-tier events involving 200+ active participants and 50+ committee members.
- Executed targeted fundraising strategies across sponsorship pipelines and merchandise campaigns to generate IDR 15,000,000+ in event funding.

SKILLS

Software Development: TypeScript, JavaScript, Python, Java, C++, React, Next.js, Tailwind CSS, PHP, Flask, shadcn/ui.

Backend & Database: SQL, PostgreSQL, SQLite, Supabase, Prisma ORM, Authentication, API Integration, Database Modeling, Token-Based Authentication.

Data, Tools & Supporting Technologies: Python/pandas, ETL, Data Cleaning, Excel, Looker Studio, Git/GitHub, VS Code.

Languages: Indonesian (Native), English (Intermediate)
